

A COMPLETE RANGE OF SEGMENTED & TURBO

9" BLADES

DESIGNED SPECIFICALLY FOR BATTERY POWERED SAWS

General Tool, offers a variety of 9" blades for battery-powered saws.

SMX, ID, and IF series saw blades will provide the fastest cutting times on concrete, brick, and block. One blade is designed specifically for asphalt, green concrete, and other soft abrasive materials. The **ID** and **IF** products are the most cost-effective, and the **SMX** products will provide the longest life as they are laser welded.

The **SB** product is specifically designed to cut PVC pipe, steel, cast iron, wood, ductile iron pipe, and reinforced concrete.

The **RB** and **RT** series turbo blades are designed to cut pavers, roofing tiles, and landscaping brick. Just like our standard turbo products, these blades will leave a much finer finish on the material, allowing the end user to use them on a broader range of decorative building products.

Find the right blade for all your applications.
